

Finance & Accountant

Detailed System Role & Workflow

Finance users manage invoices, payroll, trip costs, contracts, and profitability.

1. Primary Responsibilities

- Generate invoices
- Manage payroll
- Track expenses and revenues
- Analyze profitability
- Manage collections and payments
- Prepare financial reports

2. Full Operational Flow

Finance teams receive operational data from trips and contracts.

The system automatically links:

- Trips to invoices
- Fuel costs to buses
- Salaries to attendance
- Maintenance costs to fleet operations

Finance teams generate:

- Payroll
- Profitability reports
- Revenue analysis
- Cost tracking

3. System Interactions

- Interacts with ERP modules
- Interacts with live operational data
- Uses dashboards and reports
- Triggers workflow actions
- Generates system events
- Consumes real-time information
- Affects operational flow and business logic

4. Real-Time Data Impact

This role directly interacts with the real-time transportation ecosystem.

Actions performed by this role can affect:

- Bus operations
- Driver assignments
- Camera monitoring
- GPS tracking
- Financial workflows
- Maintenance workflows
- AI safety alerts
- Passenger information systems

Because the platform is interconnected, actions performed by one role automatically affect other departments and operational flows.

5. Important Developer Considerations

- Role-based access control (RBAC) is critical
- Permissions must be modular and scalable
- Realtime updates are required
- Audit logs should track all actions
- Cross-department workflow integration is necessary
- Dashboard views should differ by role
- Notification systems should be role-aware
- Operational events should be linked across modules

6. Final Assessment

The Finance & Accountant role is a critical part of the SEUM intelligent transportation ecosystem.

This role interacts not only with traditional ERP workflows, but also with:

- Real-time transportation operations
- AI safety systems
- GPS tracking infrastructure
- Smart bus devices
- Live camera monitoring
- Financial and operational analytics

The system must therefore be designed with interconnected workflows and scalable permission architecture.
